

CFGs

David Kauchak
CS30 – Spring 2016

Grammars

What is a grammar?

Grammars

Language view:
A grammar is a set of structural rules that govern the composition of sentences, phrases and words.

Computational view:
A grammar (often called a “formal grammar”) is a set of rules that describe what strings are valid in a formal language.

Grammars

What types of (formal) grammars have you heard of before?

Lots of different kinds of grammars:

- ▣ regular
- ▣ context-free
- ▣ context-sensitive
- ▣ recursively enumerable
- ▣ transformation grammars

Context Free Grammars (CFG)

How many people have heard of them?

What do you know about them?

Where are they used?

CFG production rules

$$S \rightarrow NP VP$$

left hand side
(single symbol)

right hand side
(one or more symbols)

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really, B}$
 $C \rightarrow \text{like cs}$

S

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really, B}$
 $C \rightarrow \text{like cs}$

S

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

$A B C$

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

$A B C$

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

$A \text{ really } C$

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

$A \text{ really } C$

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

A really like cs

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

A really like cs

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

I really like cs

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really}, B$
 $C \rightarrow \text{like cs}$

I really like cs

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

No more rules apply, so we're done!

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really, B}$
 $C \rightarrow \text{like cs}$

I really like cs

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

Is this the only string that can be derived?

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really, B}$
 $C \rightarrow \text{like cs}$

A really, B C

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars "generate" or "derive" strings:

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really, B}$
 $C \rightarrow \text{like cs}$

A really, really, B C

We can apply a rule by substituting the symbol on the left hand side with the symbols on the right

CFG example

Grammars describe a language, i.e. the strings (aka sentences) that are part of that language

$S \rightarrow A B C$
 $A \rightarrow I$
 $B \rightarrow \text{really}$
 $B \rightarrow \text{really, B}$
 $C \rightarrow \text{like cs}$

I really, really, ... like cs

CFGs formally

 $G = (NT, T, P, S)$

NT: finite set of nonterminal symbols

T: finite set of terminal symbols, **NT** and **T** are disjoint

P: finite set of productions of the form
 $A \rightarrow \alpha$, $A \in NT$ and $\alpha \in (T \cup NT)^*$

S \in NT: start symbol

What language does this represent?

 $S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

What language does this represent?

$$\left. \begin{array}{l} S \rightarrow aS \\ S \rightarrow E \\ E \rightarrow bE \\ E \rightarrow b \end{array} \right\} \text{Two options} \quad S$$

What language does this represent?

 $S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$$\begin{array}{c} S \\ \downarrow \\ aS \end{array}$$

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

aS
 \downarrow
 aaS

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

aaS
 \downarrow
 $aaaS$

- Can do this as many times as we want
- Keeps adding more a's to the front

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$aaaS$
 \downarrow
 $aaaE$

Eventually, apply second rule

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$aaaE$

Two options

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$aaaE$
 \downarrow
 $aaabE$

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$aaabE$
 \downarrow
 $aaabbE$

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$aaabbE$
 \downarrow
 $aaabbbE$

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

$aaabbE$
 \downarrow
 $aaabb...bE$

- Can do this as many times as we want
 - Keeps adding more b's to the end

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

aaabb...bE

aaabb...bb

Eventually, apply second rule

What language does this represent?

$S \rightarrow aS$
 $S \rightarrow E$
 $E \rightarrow bE$
 $E \rightarrow b$

aaabb...bE

aaabb...bb

Grammar represents all strings with zero or more a's followed by one or more b's
